## INVESTMENT MANAGEMENT

### RHIM ENTERPRISE MODEL FACTSHEET

The RHIM Enterprise model aims to achieve long term capital growth by investing in collective investment schemes. This is a multi-asset portfolio with an equity weight of between 60% and 85% which will involve investing in UK and overseas equities, including emerging markets. In seeking higher returns, the model may also utilise specialist sectors which may experience periods of higher volatility. However, the model will also hold between 15%-40% in medium or lower risk investments such as targeted absolute return funds, fixed interest and/or property. The model will sit within risk profile 6 on a scale of 1-10, where 1 is cash and 10 is 100% high risk equity markets. Investors accept that this model has historically experienced volatility of around 10% per annum. Please see the reverse for historical volatility and peak to trough data.

#### Commentary

**FEBRUARY 2019 UPDATE**

The outlook for global growth has been declining and as a result equity markets have endured several significant corrections, most recently in Q4 of 2018. Most equity markets still remain some way below their previous highs, even the US, despite a strong rally in the first two months of 2019. The model is positioned relatively defensively, with exposure to equities towards the bottom end of its permitted range. Outside of equities the exposure to Targeted Absolute Return funds, Strategic Bonds (which have been moving from credit into government bonds for some time) and gold have all helped protect the model from the market set backs encountered in Q4 of 2018. The gold fund is up 9% over six months whilst returns from equity funds are in negative territory. The one year return masks this more defensive positioning as this period includes a strong summer for US equities and in particular US technology which we have largely not participated in, and this area of largely momentum based investing remains susceptible to further shocks in our view.

Risk Return (5 years) as at 31<sup>st</sup> December

Performance (Cumulative) as at 28th February 2019

	1 year	5 years	10 years	Since Inception

### Risk

Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

### This Factsheet

This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

### Currency

Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

### Investment Term

It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

### Property Funds

The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

### Performance

It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
