RHIM DYNAMIC MODEL FACTSHEET

The RHIM Dynamic model aims to produce an attractive level of capital growth over the medium term with lower volatility than the IA sector, investing in collective investment schemes. This is a multi-asset global portfolio with an equity weight of between 50% and 75% which will involve investing in UK and overseas equities, including emerging markets. However, the model will typically also use targeted absolute return funds in order to reduce volatility associated with equity investing and at least 15% will be also invested in fixed interest and/or property as deemed appropriate. Asset allocation will be actively managed around the higher side of medium risk profile. This means investors should be comfortable with periods of volatility, although this is expected to be lower than a pure equity portfolio. The model will sit within risk profile 5 on a scale of 1-10, where 1 is cash and 10 is 100% high risk equity markets. Please see the reverse for historical volatility and peak to trough data.

Commentary

MARCH 2019 UPDATE

The RHIM Dynamic model rose 4.6% over the three months as equities rebounded sharply from the December correction. Fears over a global slowdown and tighter monetary conditions quickly flipped to relief that the Fed may now pause on further interest rate hikes. The model has moved to a slightly more cautious position over the last twelve months, reducing European equities, buying a defensive UK fund; RWC Enhanced Income, and adding gold into the model through Merian Gold and Silver. The gold position has been delivering strong results, even during periods of equity market weakness and is up 5.2% over three months and 10.9% over six. The best performing fund over the year was Polar Capital Global Convertibles (up 11.3%), followed by M&G Emerging Market Debt (+8.6%). Offsetting some of this strength is the weighting to Targeted Absolute Return funds which have been making positive returns when markets fall, but as a consequence of this 'risk-off' positioning have lost ground in this Q1 rally. They remain an important diversifier if markets remain volatile or if the current volatility turns into a more persistent downward trend. We have also sold the bricks and mortar property fund in August, netting a reasonable gain and eliminating the liquidity risk in the event that Brexit chaos leads to a panic-sell of the asset class.

Risk Return (5 years) as at 31st March

Performance (Cumulative) as at 31st March 2019

	1 year	5 years	10 years	Since Inception
RHIM Model	1.20%	29.37%	111.68%	121.66%
PCI Return	2.41%	21.61%	78.89%	73.18%
IA Sector	4.36%	34.20%	133.30%	97.80%

RHIM Model – since inception	6.19%	7.47%	-21.18%
<i>IA Sector</i>	5.3%	9.7%	-31.8%

Risk

Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

This Factsheet

This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

Currency

Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

Investment Term

It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

Property Funds

The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

Performance

It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
