

RICHMOND HOUSE INVESTMENT MANAGEMENT

RHIM BLENDED MODEL FACTSHEET

The RHIM Blended model aims to produce moderate levels of capital growth over the medium term with lower volatility than the IA sector average, investing in collective investment schemes. This is a multi-asset global portfolio with an equity weight between 45% and 65% which will include overseas equity exposure. The model will also typically use targeted return funds in order to reduce volatility associated with equity investing and at least 20% will be invested in fixed interest and/or property as deemed appropriate. Asset allocation will be actively managed whilst maintaining a balanced risk profile. Investors should be comfortable with periods of volatility, although this is expected to be lower than a pure equity portfolio. The model will sit within risk profile 5 on a scale of 1-10, where 1 is cash and 10 is 100% in high risk equity markets. Please see the reverse for historical volatility and peak to trough data.

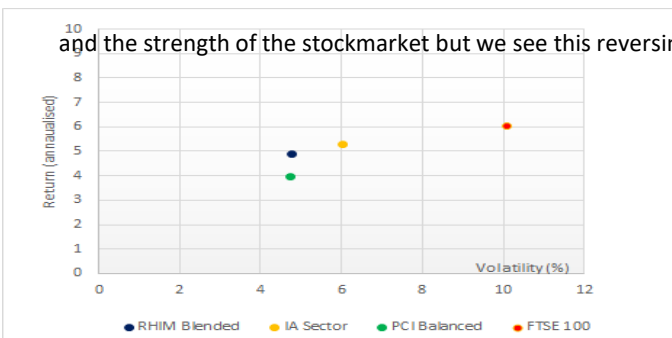

Commentary

APRIL 2019 UPDATE

The model gained 2.4% over the last three months as equities rose on the back of cheaper borrowing costs and positive developments in the US-China trade talks. Corporate earnings were weaker as the global economy slowed and this caused government debt to rise in value. Over the year, the model was down 0.3% following the steep falls in equities in the last quarter of 2018 even though the model outperformed strongly that quarter. US equities have been the strongest asset class over the year and the Artemis US Select fund was up 18.7% over the year. The Newton Global Income fund was up 15.8% due to its large US allocation. The other equity funds were generally up around 4-5% over the year. The fixed income funds made positive returns with the Polar Capital Global Convertible Bond fund up 8.7% given its equity exposure and the Strategic Bond funds up 4% as government bond yields tightened. The equity long/short funds, which did well in the last quarter of 2018, were down 6.6% and 10.8% over the year as they are positioned for equities to fall. The Merian Gold & Silver fund was down 12.6% as confidence grew in the US dollar

Risk Return (5 years) as at 31st March

Performance (Cumulative) as at 30th April 2019

	1 year	5 years	10 years	Since Inception
RHIM Model	-0.31%	28.56%	96.96%	107.37%

<i>IA Sector</i>	4.7%	8.2%	-27.7%

Risk

Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

This Factsheet

This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

Currency

Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

Investment Term

It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

Property Funds

The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

Performance

It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
