

RICHMOND HOUSE INVESTMENT MANAGEMENT

RHIM DYNAMIC MODEL FACTSHEET

The RHIM Dynamic model aims to produce an attractive level of capital growth over the medium term with lower volatility than the IA sector, investing in collective investment schemes. This is a multi-asset global portfolio with an equity weight of between 50% and 75% which will involve investing in UK and overseas equities, including emerging markets. However, the model will typically also use targeted absolute return funds in order to reduce volatility associated with equity investing and at least 15% will be also invested in fixed interest and/or property as deemed appropriate. Asset allocation will be actively managed around the higher side of medium risk profile. This means investors should be comfortable with periods of volatility, although this is expected to be lower than a pure equity portfolio. The model will sit within risk profile 5 on a scale of 1-10, where 1 is cash and 10 is 100% high risk equity markets. Please see the reverse for historical volatility and peak to trough data.

Commentary

APRIL 2019 UPDATE

The Dynamic model was up 3.1% over the last three months as equity markets climbed even though the global economy slowed and corporate earnings declined. Share buybacks were a big driver of returns as was confidence in the development of the US-China trade talks. Fixed income made positive returns as government bond yields declined and their prices rose. Over the year, the model made 0.1% as equity markets recovered their losses from the last three months of 2018 when the model outperformed by 1.7%. The Artemis US Select fund made 18.7% and the Newton Global Income fund 15.8%. The equity long/short funds, which did well in 2018, have held the model back over the last twelve months with the two funds down 6.6% and 10.8% as they are positioned for equities to fall. The Merian Gold & Silver fund was down 12.6% as markets rose and the US dollar strengthened. We expect this to reverse as the US-China trade war progresses and the fund performed strongly at the end of 2018 when stockmarkets fell.

Risk Return (5 years) as at 31st March

Performance (Cumulative) as at 30th April 2019

	1 year	5 years	10 years	Since Inception
RHIM Model	0.07%	31.66%	107.52%	124.69%

RHIM Model – since inception	6.19%	7.47%	-21.18%
<i>IA Sector</i>	5.3%	9.7%	-31.8%

Risk

Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

This Factsheet

This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

Currency

Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

Investment Term

It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

Property Funds

The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

Performance

It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
