RHIM DYNAMIC MODEL FACTSHEET

The RHIM Dynamic model aims to produce an attractive level of capital growth over the medium term with lower volatility than the IA sector, investing in collective investment schemes. This is a multi-asset global portfolio with an equity weight of between 50% and 75% which will involve investing in UK and overseas equities, including emerging markets. However, the model will typically also use targeted absolute return funds in order to reduce volatility associated with equity investing and at least 15% will be also invested in fixed interest and/or property as deemed appropriate. Asset allocation will be actively managed around the higher side of medium risk profile. This means investors should be comfortable with periods of volatility, although this is expected to be lower than a pure equity portfolio. The model will sit within risk profile 5 on a scale of 1-10, where 1 is cash and 10 is 100% high risk equity markets. Please see the reverse for historical volatility and peak to trough data.

Risk Rating

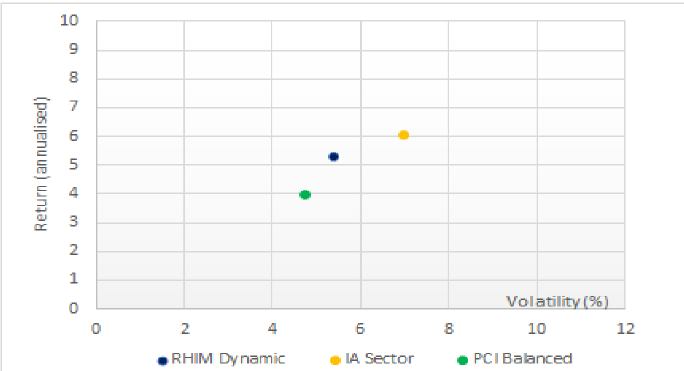
1	2	3	4	5	6	7	8	9	10
100% cash			50% Equity			100% Equity		100% EM Eq	

Commentary

May 2019 UPDATE

The Dynamic model gained 2.4% over the last three months as it has a higher allocation to equities than the Blended model and equity markets rose in the period. Stocks were up in March and April on the back of positive announcements by the Trump administration before falling back in May when Trump escalated the trade war with China. Corporate earnings have been weak but share buybacks have continued to prop up US equity prices. The fall in the oil price has brought inflation expectations down and government bonds have done well in this environment. Over the year, the model was down 1.5% as almost all assets lost money in 2018. The Artemis US Select fund was up 10.6% and the Newton Global Income fund 12.5% as U.S. equities did better than the other equity funds in the model which were down around 5% over the period. The equity long/short funds have held the model back as U.S. equities have risen. The two funds, which are positioned for U.S. equities to fall, were down 4.3% and 10.6%. They have performed well when markets have fallen as has the Merian Gold & Silver fund. The Merian fund was down 15.7% over the year as U.S. equities rose and the US dollar strengthened. The fund has experienced big swings in performance but we expect gold to be a big beneficiary of the US-China trade war.

Risk Return (5 years) as at 31st March



Performance (Cumulative) as at 31st May 2019

	1 year	5 years	10 years	Since Inception
RHIM Model	-1.54%	28.44%	104.71%	123.76%
PCI Return	-0.05%	20.88%	72.36%	74.65%
IA Sector	0.52%	33.73%	116.60%	103.61%

IA Sector	*5.3%*	*9.7%*	*-31.8%*

Risk
Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

This Factsheet
This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

Currency
Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

Investment Term
It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

Property Funds
The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

Performance
It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
