

RICHMOND HOUSE INVESTMENT MANAGEMENT

RHIM INCOME MODEL FACTSHEET

The RHIM Income model aims to produce a yield in the region of the FTSE All Share and modestly grow the capital over the medium term. The model is likely to experience similar volatility to the IA sector given that it stays fully invested within income producing assets throughout the cycle. This is a multi-asset global income portfolio with an equity weight between 40% and 55% which will include overseas equity exposure, balanced with at least 35% in fixed interest and property as deemed appropriate. Asset allocation will be actively managed whilst maintaining a balanced risk profile. Income generated can be withdrawn or reinvested. Investors should be comfortable with periods of volatility, although this is expected to be less than a pure equity portfolio. Withdrawing income will reduce growth potential. The model will sit in profile 5 on a scale of 1-10, where 1 is cash and 10 is 100% high risk equity markets. Please see the reverse for historical volatility and peak to trough data.

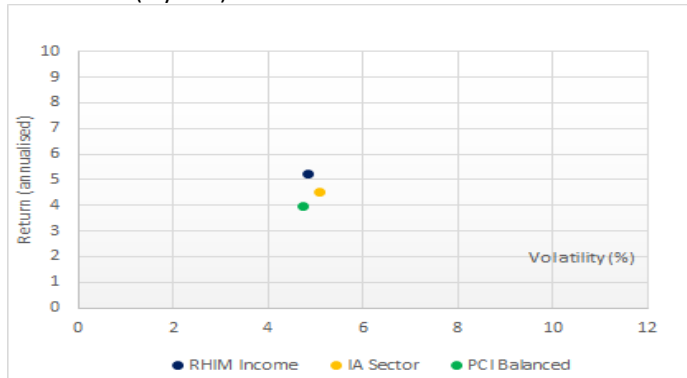

Commentary

May 2019 UPDATE

The Income model rose 2.5% over the last three months as equities made good returns in March and April before giving some back in May when President Trump launched another round of tariffs on China. The global economy continued to slow and corporate earnings declined but share buybacks in the USA supported equity prices. The oil price fell on fears about the strength of the global economy and lower inflation expectations meant government bonds did well. Over the year, the model rose 0.9%. The Newton Global Income fund was up 12.5% due to its US equity allocation but other regional equity funds were barely positive over the year. The fixed income funds made good returns as equities struggled with the M&G Emerging Markets Bond fund up 11.0%. The Strategic Bond funds made 5-6% and the Polar Capital Global Convertible bond fund rose 4.5%. The worst detractor was the Merian Gold & Silver fund which was down 15.7% over the year. The fund's value has varied considerably. Performance has been weak when US equities and the US dollar have risen but the fund has performed well when equities have sold off. We believe that gold will be a big beneficiary of the US-China trade war.

Risk Return (5 years) as at 31st March

Performance (Cumulative) as at 31st May 2019

	1 year	5 years	10 years	Since Inception
RHIM Model	0.92%	26.83%	114.02%	88.04%

RHIM Model – since inception	5.23%	7.46%	-24.04%
<i>IA Sector</i>	3.9%	6.8%	-23.6%

Risk

Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

This Factsheet

This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

Currency

Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

Investment Term

It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

Property Funds

The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

Performance

It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
