

RICHMOND HOUSE INVESTMENT MANAGEMENT

RHIM BLENDED MODEL FACTSHEET

The RHIM Blended model aims to produce moderate levels of capital growth over the medium term with lower volatility than the IA sector average, investing in collective investment schemes. This is a multi-asset global portfolio with an equity weight between 45% and 65% which will include overseas equity exposure. The model will also typically use targeted return funds in order to reduce volatility associated with equity investing and at least 20% will be invested in fixed interest and/or property as deemed appropriate. Asset allocation will be actively managed whilst maintaining a balanced risk profile. Investors should be comfortable with periods of volatility, although this is expected to be lower than a pure equity portfolio. The model will sit within risk profile 5 on a scale of 1-10, where 1 is cash and 10 is 100% in high risk equity markets. Please see the reverse for historical volatility and peak to trough data.

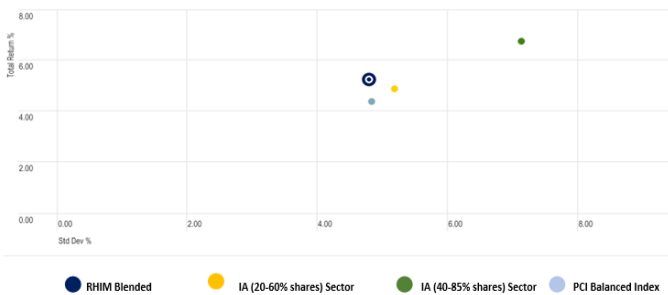

Commentary

June 2019 UPDATE

The Blended model was up 3.2% over the last three months as equity markets climbed. The global economy is weakening but this is prompting central banks to cut rates and talk of more monetary stimulus. The lower bond yields also cheapen borrowing costs allowing companies to buy back their stocks more easily. Not only have bonds and equities done well but the gold price has perked up on the possibility of more money printing. The Merian Gold & Silver fund was up over 15% in June after comments from the European Central Bank. Over the year, the Blended model was up 1.4% as recent gains offset last year's losses. US equities were the best performing stockmarket. The Artemis US Select fund was up 16%, as was the Newton Global Income fund, which has a large US allocation. The equity long/short funds have held the model back over the last twelve months but they performed well when markets fell at the end of 2018. The fixed income funds made mid-single digit returns.

Risk Return (5 years) as at 30th June 2019

Performance (Cumulative) as at 30th June 2019

	1 year	5 years	10 years	Since Inception
RHIM Model	1.42%	28.94%	97.15%	111.84%

Risk

Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

This Factsheet

This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

Currency

Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

Investment Term

It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

Property Funds

The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

Performance

It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
