

RICHMOND HOUSE INVESTMENT MANAGEMENT

RHIM BLENDED MODEL FACTSHEET

The RHIM Blended model aims to produce moderate levels of capital growth over the medium term with lower volatility than the IA sector average, investing in collective investment schemes. This is a multi-asset global portfolio with an equity weight between 45% and 65% which will include overseas equity exposure. The model will also typically use targeted return funds in order to reduce volatility associated with equity investing and at least 20% will be invested in fixed interest and/or property as deemed appropriate. Asset allocation will be actively managed whilst maintaining a balanced risk profile. Investors should be comfortable with periods of volatility, although this is expected to be lower than a pure equity portfolio. The model will sit within risk profile 5 on a scale of 1-10, where 1 is cash and 10 is 100% in high risk equity markets. Please see the reverse for historical volatility and peak to trough data.

Commentary

July 2019 UPDATE

The Blended model was up 4.3% over the last three months as equity markets climbed higher on talk of easier monetary conditions even though the global economy has been weakening sharply. Manufacturing and trade have been particularly sickly and central banks have been cutting rates and talking of additional monetary policies to combat the declines. Falling interest rates have been a favourable backdrop for bonds too and yields are now so low they are negative i.e. you pay to lend money. Gold, which has no yield, has done well in this environment and the Merian Gold & Silver fund was up over 15% again in July. Over the year to July, the Blended model was up 3.0% as the market rally this year has offset the losses from the last quarter of 2018. US equities have been the best performing stockmarket and the Artemis US Select fund was up 22%. Other equity regions, however, have struggled to get into positive territory. The equity long/short funds have held the model back over the last twelve months but they have performed well in market falls. The fixed income funds have performed better than the equity funds with the Strategic Bond funds and the convertible bond fund making high single-digit returns.

Risk Return (5 years) as at 30th June 2019

Performance (Cumulative) as at 31st July 2019

	1 year	5 years	10 years	Since Inception
RHIM Model	3.01%	30.64%	96.35%	116.22%

RHIM Model – since inception	5.72%	6.39%	-20.14%
<i>IA Sector</i>	4.89%	8.13%	-27.67%

Risk

Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

This Factsheet

This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

Currency

Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

Investment Term

It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

Property Funds

The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

Performance

It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
