

RICHMOND HOUSE INVESTMENT MANAGEMENT

RHIM DYNAMIC MODEL FACTSHEET

The RHIM Dynamic model aims to produce an attractive level of capital growth over the medium term with lower volatility than the IA sector, investing in collective investment schemes. This is a multi-asset global portfolio with an equity weight of between 50% and 75% which will involve investing in UK and overseas equities, including emerging markets. However, the model will typically also use targeted absolute return funds in order to reduce volatility associated with equity investing and at least 15% will be also invested in fixed interest and/or property as deemed appropriate. Asset allocation will be actively managed around the higher side of medium risk profile. This means investors should be comfortable with periods of volatility, although this is expected to be lower than a pure equity portfolio. The model will sit within risk profile 5 on a scale of 1-10, where 1 is cash and 10 is 100% high risk equity markets. Please see the reverse for historical volatility and peak to trough data.

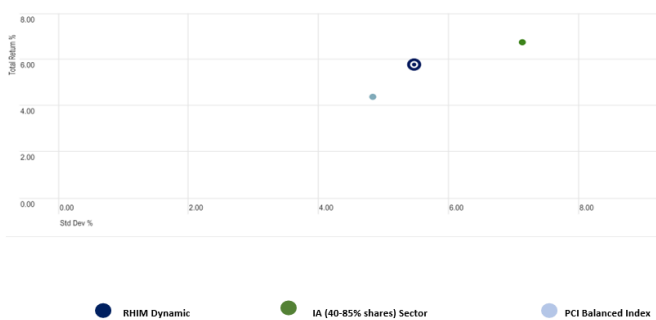

Commentary

July 2019 UPDATE

The Dynamic model gained 5.2% over the last three months as the larger US equity and emerging market debt positions were the best performing funds. Bond yields fell sharply which helped the higher yielding emerging market bonds while US equities rose on expectations that the U.S. Federal Reserve would cut interest rates and provide additional stimulus. Other equities were more subdued as the global economy continues to weaken. With the US economy heavily influenced by the level of the U.S. stockmarket, it is the best performing economy in the world at the moment with the S&P 500 near all-time highs. With bond yields so low that \$17 trillion of debt now has a negative yield and with the prospect of more central bank money printing, gold, which has no yield, is starting to look more attractive. The Merian Gold & Silver fund was up another 15% in July. Over the year, the Dynamic model was up 4.2% as the gains in 2019 offset the losses at the end of 2018. US equities were the best performing stockmarket over the period, with most other regions barely breaking even, and the Artemis US Select fund was up 22%. Fixed income funds have also done well with the M&G Emerging Market Bond fund up 19% and the strategic bond funds up 7-8%.

Risk Return (5 years) as at 30th June 2019

Performance (Cumulative) as at 31st July 2019

	1 year	5 years	10 years	Since Inception
RHIM Model	4.20%	34.55%	107.55%	136.46%

RHIM Model – since inception	6.38%	7.43%	-21.18%
<i>IA Sector</i>	5.51%	9.68%	-31.77%

Risk

Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

This Factsheet

This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

Currency

Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

Investment Term

It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

Property Funds

The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

Performance

It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
