## INVESTMENT MANAGEMENT

### RHIM STRATEGIC MODEL FACTSHEET

The RHIM Strategic model is a defensive multi-asset portfolio which aims to generate growth ahead of inflation over a rolling 3 year period yet operate with a low level of volatility, using collective investment schemes (funds). The emphasis is on capital preservation and steady returns. The majority of the model will be invested in lower risk funds, with a maximum of 30% permitted in traditional equity funds. Targeted absolute return funds and fixed income will be used, in addition to property and cash as deemed appropriate. Asset allocation will be actively managed whilst maintaining a low risk profile. Any falls in the value of a portfolio should usually be small. However, potential returns are also likely to be modest. The model will sit within risk profile 3 on a scale of 1-10, where 1 is cash and 10 is 100% in emerging markets. Please see the reverse for historical volatility and peak to trough data.

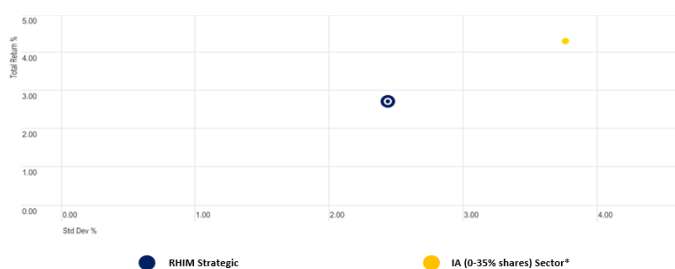

#### Commentary

**November 2019 UPDATE**

The Strategic model was up 0.24% over the three months to November on the back of rising UK equity markets. The pound strengthened over the period which made overseas investments less valuable in sterling. Fixed income yields rose which caused the prices of bonds and gold to decline. Global growth weakened over the period but the easier financial conditions caused by central bank stimulus has pushed stockmarkets higher even though company earnings have fallen. With the likelihood of a Corbyn victory and a no-deal Brexit fading, smaller UK domestic companies outperformed the large multinationals. The FTSE 250 was up 8.1% over the three months while the FTSE 100 was up 2.9%. The fixed income funds were down 1% over the quarter but the property fund was up over 5%. The Strategic model was up 4.7% over the year to 30 November 2019, 3.2% ahead of UK CPI.

Risk Return (5 years) as at 30<sup>th</sup> September 2019

<b>RHIM Model – since inception</b>	4.14%	2.88%	4.61%
<i>IA Sector</i>	4.95%	3.74%	6.45%

### Risk

Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

### This Factsheet

This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

### Currency

Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

### Investment Term

It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

### Property Funds

The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

### Performance

It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
