RHIM STRATEGIC MODEL FACTSHEET

The RHIM Strategic model is a defensive multi-asset portfolio which aims to generate growth ahead of inflation over a rolling 3 year period yet operate with a low level of volatility, using collective investment schemes (funds). The emphasis is on capital preservation and steady returns. The majority of the model will be invested in lower risk funds, with a maximum of 30% permitted in traditional equity funds. Targeted absolute return funds and fixed income will be used, in addition to property and cash as deemed appropriate. Asset allocation will be actively managed whilst maintaining a low risk profile. Any falls in the value of a portfolio should usually be small. However, potential returns are also likely to be modest. The model will sit within risk profile 3 on a scale of 1-10, where 1 is cash and 10 is 100% in emerging markets. Please see the reverse for historical volatility and peak to trough data.

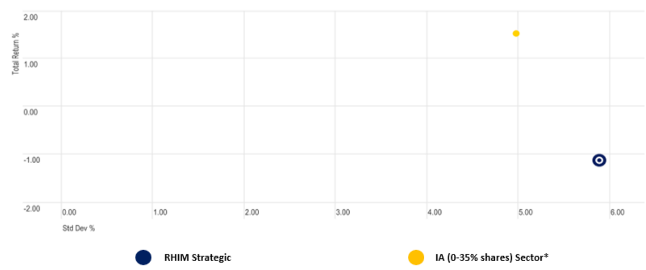
Commentary

April 2020 UPDATE

Equity markets continued to recover their losses from the first half of March 2020 as central banks and governments increased their stimulus measures. The Strategic model rose 4.7% in April reducing the loss over the last three months. The model's infrastructure and real return funds were up 4-5% compared to 2% for the fund's strategic bond fund. The equity funds performed well with the UK smaller companies fund up 12% in and the global equity fund up 14%. The best performing fund, though, was the gold equity fund which was up 29% on the back of all the money-printing by the authorities. The fund is volatile but gold, which we can only access through an equity fund, is one of the few ways of maintaining the real value of your money in the current investment environment. We have diversified away from government bonds into real assets that governments cannot print. This will bring higher volatility but we expect the underlying funds, which are set up to outperform cash over time, to be a better store of value going forwards.

Risk Return (5 years) as at 31st March 2020



*For illustrative purposes only. The RHIM Strategic Model does not have a benchmark.

Performance (Cumulative) as at 30th April 2020

RHIM Model – 5 years	-1.13%	5.89%	-14.61%
RHIM Model – since inception	2.17%	5.07%	-14.61%

Risk
Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

This Factsheet
This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

Currency
Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

Investment Term
It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

Property Funds
The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

Performance
It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
