RHIM CAUTIOUS MODEL FACTSHEET

The RHIM Cautious model aims to deliver capital growth over the medium term, with lower volatility than the sector average using collective investment schemes (funds). Asset allocation will be actively managed whilst maintaining a cautious risk profile. This is a multi-asset portfolio which may invest between 25% and 45% in traditional equity funds which will include UK and overseas equities. The remainder will be invested in lower risk funds such as targeted absolute return funds and at least 35% across fixed income and property. The model is also permitted to hold up to 10% in cash when deemed appropriate. In order to deliver returns in excess of cash over the longer term investors must accept that the investment could fall in value, particularly in the short term. The model will sit within risk profile 4 on a scale of 1-10, where 1 is cash and 10 is 100% high risk equity markets. Please see the reverse for historical volatility and peak to trough data.

Commentary

June 2020 UPDATE

The Cautious model had another good month in June as equity markets rose on the back of increasing money supply and government spending. Inflation expectations increased slightly and the Cautious model gained 2.2% in June as the real assets that should go up in value if inflation rises were up more than the model's strategic bond fund. The infrastructure and real asset funds were up over 1.5% as a group while the strategic bond fund was up 1% in June. With such a favourable monetary backdrop most of the fund's holdings were up in the month with only two funds making negative returns. The Merian Gold & Silver fund was up 5.4% in June as governments increased their spending. The Asian and emerging market funds were the best performing holdings as the U.S. dollar weakened and the JPM Asia Growth fund was up 11.6% in June and the RWC Emerging Markets fund was up 10.8%. Europe was a strong region as well given the new stimulus programmes and the BlackRock European Dynamic fund was up 6.7%. The Polar Capital Global Convertible bond fund was up 4.6% as companies refinance at higher rates.

Risk Return (5 years) as at 30th June 2020

Performance (Cumulative) as at 30th June 2020

	1 year	5 years	10 years	Since Inception

Risk

Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

This Factsheet

This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

Currency

Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

Investment Term

It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

Property Funds

The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

Performance

It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
