## RHIM STRATEGIC MODEL FACTSHEET

The RHIM Strategic model is a defensive multi-asset portfolio which aims to generate growth ahead of inflation over a rolling 3 year period yet operate with a low level of volatility, using collective investment schemes (funds). The emphasis is on capital preservation and steady returns. The majority of the model will be invested in lower risk funds, with a maximum of 30% permitted in traditional equity funds. Targeted absolute return funds and fixed income will be used, in addition to property and cash as deemed appropriate. Asset allocation will be actively managed whilst maintaining a low risk profile. Any falls in the value of a portfolio should usually be small. However, potential returns are also likely to be modest. The model will sit within risk profile 3 on a scale of 1-10, where 1 is cash and 10 is 100% in emerging markets. Please see the reverse for historical volatility and peak to trough data.

### Commentary

### June 2020 UPDATE

June saw equity markets rise on the back of continued government stimulus and rising money supply. The Strategic model aims to outperform inflation and the real assets in the portfolio which should go up if inflation rises outperformed the strategic bond fund. The Strategic model rose 1.6% in June reducing the underperformance from the first quarter of the year. The Strategic model was up 8.8% in the second quarter of the year. Almost all the holdings made a positive return in the month with just the structured product fund down 0.3%. Most of the fund holdings were up about 2% in June. The Merian Gold & Silver fund was up 5.4% in the month as government spending mounted and inflation expectations ticked up. The Polar Capital Global Convertible bond fund was up 4.6% as the fund continues to benefit from the higher yields available now from companies refinancing themselves. With bond yields so low and the prospect of inflation increasing as governments spend more, the ability to achieve inflation-plus returns with low volatility is becoming increasingly difficult but the model has a good blend of funds that should achieve this.

<b>RHIM Model – since inception</b>	3.09%	5.29%	-14.61%
<i>IA Sector</i>	4.45%	4.70%	-8.69%

### Risk

Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

### This Factsheet

This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

### Currency

Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

### Investment Term

It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

### Property Funds

The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

### Performance

It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
