## INVESTMENT MANAGEMENT

### RHIM DYNAMIC MODEL FACTSHEET

The RHIM Dynamic model aims to produce an attractive level of capital growth over the medium term with lower volatility than the IA sector, investing in collective investment schemes. This is a multi-asset portfolio with an equity weight of between 60% and 85% which will involve investing in UK and overseas equities, including emerging markets. In seeking higher returns, the model may also utilise specialist sectors which may experience periods of higher volatility. However, the model will also hold between 15%-40% in medium or lower risk investments such as targeted absolute return funds, fixed interest and/or property. This means investors should be comfortable with periods of volatility, although this is expected to be lower than a pure equity portfolio. The model will sit within risk profile 6 on a scale of 1-10, where 1 is cash and 10 is 100% high risk equity markets. The model had a risk profile of 5 until July 2020 and this is reflected in the historical volatility and peak to trough data on the reverse page.

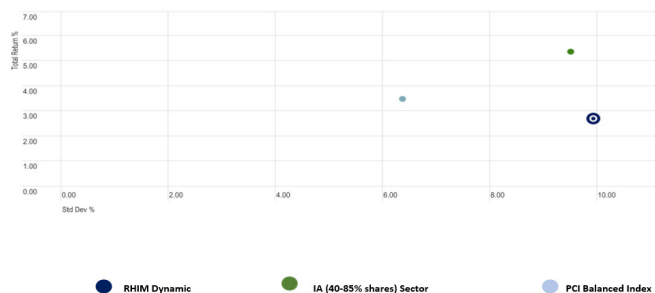

#### Commentary

#### August 2020 UPDATE

The Dynamic model had a good August rising 2.9%, outperforming its peer group by 0.6%. The U.S. dollar weakened further and this helped several of the holdings. The currency-hedged share class of the Artemis US Select fund was up 5.0% in the month while the unhedged share class was up 3.6%. A weaker U.S. dollar tends to be good for emerging markets and the Aubrey Global Emerging Markets fund was up 10.4% in August and the JPM Asia Growth fund was up 6.2%. The FTSE 100 was one of the weaker indices, rising 1.8% in the month, but our preference for smaller companies was helpful as the Liontrust UK Micro-Cap and Franklin UK Smaller Companies funds were up over 4%. Our preference for real assets that have inflation protection over fixed income, given increasing corporate defaults and soaring government debt levels, was helpful as the real asset funds, as a group, were up nearly 2% in August while the strategic bond funds were down slightly. The gold price experienced a correction in the month after rising strongly since March but the Merian Gold & Silver fund was still up 2.7% in August.

#### Risk Return (5 years) as at 30th June 2020

#### Performance (Cumulative) as at 31st August 2020

	1 year	5 years	10 years	Since Inception
<b>RHIM Model</b>	-1.50%	19.98%	81.68%	130.19%
<b>PCI Return</b>	0.52%	23.11%	58.88%	82.35%
<b>IA Sector</b>	1.25%	36.96%	92.55%	111.10%

### Risk

Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

### This Factsheet

This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

### Currency

Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

### Investment Term

It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

### Property Funds

The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

### Performance

It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
