## INVESTMENT MANAGEMENT

## RHIM ENTERPRISE MODEL FACTSHEET

The RHIM Enterprise model aims to achieve long term capital growth by investing in collective investment schemes. This is a multi-asset portfolio with an equity weight of between 80% and 90% which will involve investing in UK and overseas equities, including emerging markets. In seeking higher returns, the model may also utilise specialist sectors which may experience periods of higher volatility. However, the model will also hold between 10%-20% in medium or lower risk investments such as targeted absolute return funds, fixed interest and/or property. The model will sit within risk profile 7 on a scale of 1-10, where 1 is cash and 10 is 100% high risk equity markets. The model had a risk profile of 6 until July 2020 and this is reflected in the historical volatility and peak to trough data on the reverse page.

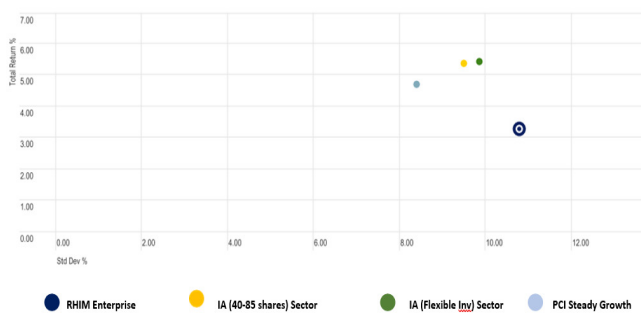

### Commentary

### August 2020 UPDATE

The Enterprise model continued its good run of performance in August, rising 3.5%. The model has a high equity weight but this was a good month for equities as the U.S. dollar weakened. The currency-hedged share class of the Artemis US Select fund was up 5.0% in August while the unhedged share class was up 3.6%. A weaker dollar is stimulative for emerging markets that use the U.S. dollar for their financing and the Aubrey Global Emerging Markets fund was up 10.4% in August while the JPM Asia Growth fund was up 6.2%. The UK was one of the weaker regions and the FTSE 100 index was up 1.8% in the month. We prefer UK smaller companies that have higher growth and the ability to adapt more quickly to changing circumstances and the Liontrust UK Micro-Cap and Franklin UK Smaller Companies funds were up more than 4% in August. A weaker dollar is normally good for the gold price but precious metals pulled back in August after rising strongly since March. We expect some consolidation before the metals move higher again in the face of ever-increasing government spending. The Merian Gold & Silver fund was still up 2.7% in the month.

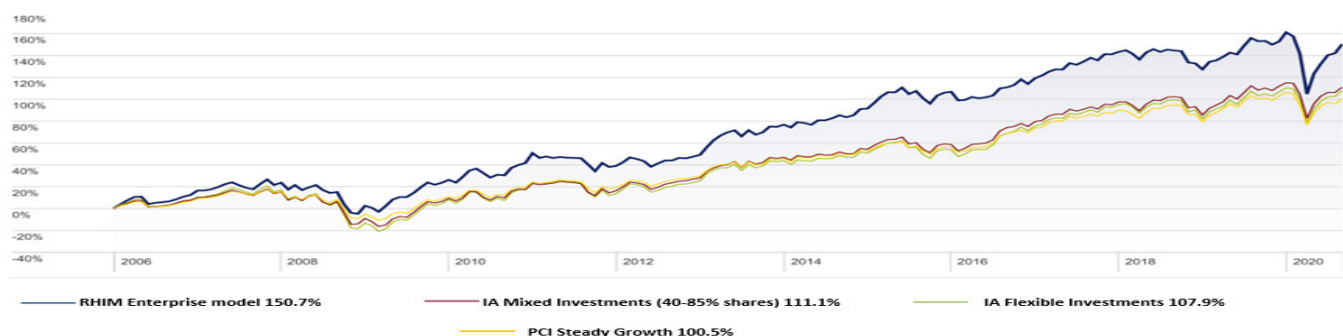

### Risk Return (5 years) as at 30th June 2020

### Performance (Cumulative) as at 31st August 2020

	1 year	5 years	10 years	Since Inception
<b>RHIM Model</b>	-1.07%	24.77%	92.44%	150.72%

### Risk

Higher-risk investments tend to experience greater volatility, which means they are likely to go up and down in value more often and by larger amounts than lower-risk investments. In return, higher-risk investments have the potential to produce higher returns over the long term, although this is not guaranteed. If you do not understand the risks involved with the portfolio it is important that you seek clarification from your Financial Adviser before making an investment.

### This Factsheet

This factsheet demonstrates the exposure, characteristics and performance of the named RHIM model. Your actual portfolio may differ depending on your individual circumstances. All features described in this fact sheet are current at the time of publication and may be changed in the future.

### Currency

Some funds will hold overseas assets and as a result will also have exposure to overseas currencies. Exchange rates can fluctuate and may cause the value of the investment to rise or fall.

### Investment Term

It is generally accepted that equity investments should be regarded as long term investments and should be held for a minimum of five years, ideally longer. Your time horizon and capacity for loss are important considerations when selecting the most appropriate RHIM model.

### Property Funds

The value of property is generally a matter of a valuer's opinion which may not be readily realisable. There are liquidity risks associated with investing in property whereby encashments may be delayed waiting for properties to be sold.

### Performance

It should be noted that past performance is not necessarily a guide to future performance. The price of shares/units and income from them may fall as well as rise and is not guaranteed. RHIM Performance illustrated is net of fund charges, but does not include Richmond House Investment Management discretionary management fees, nor fees that may be incurred through your Financial Adviser. PCI returns are net of the Discretionary Manager charges and use provisional data.
